Projects

RouteLedger

Delivery-tracking backend for a small courier startup. Drivers post location pings, dispatchers query live routes, and a nightly job summarises late deliveries per region.

Role: Backend developer. Stack: fastapi, postgres, redis, docker.

- Designed REST endpoints for pings, routes and delivery summaries
- Deduplicated repeated driver pings with a hash map keyed by driver and minute
- Cut a slow summary query by pre-aggregating per-region counts

ClubDesk

Event-registration API for college clubs. Members sign up for events, organisers export attendance, and seat limits are enforced per event.

Role: Backend lead. Stack: flask, mysql, docker.

- Implemented waitlist promotion when a registered member cancels
- Merged two sorted attendance exports with a two-pointer pass

Technical Skills

Languages: python, sql.

Skills: rest apis, caching, sql.

Data Structures and Algorithms

arrays, hashing, two pointers, sliding window, sorting.
